Dear Hiring Manager:

Seeking to reenter the workforce, I am keen to acquire employment in a tech role and contribute to a positive mission of empowering customers and employees. As a Python practitioner, I have growing expertise in technology tools. Furthermore, I have proven leadership skills and an inclusive communication style that engenders multi-stakeholder success.

I am passionate about being innovative and constantly striving for excellence. Having a flourishing career in the environmental sector and moving abroad, I realized I can expand my impact by obtaining computer programming talents and be ready for further reaching opportunities. I have completed Python, data science, and machine learning certificates and I am currently pursuing Google's TensorFlow Developer Certificate. I believe myself to be an effective learner as evidenced by the bespoke projects I have added to my Github portfolio. Moreover, during my tenure at SoCalGas as a leader and auditor, my approach to communication and leadership was successful on a large scale on compelling initiatives across functions.

I am enthusiastic about learning programming and data methods as they are constantly evolving and will allow me to make consequential impressions in organizations. A role at your company - with its ethos of trust, variety of projects and opportunities to work with experts - would afford me the chance to fulfill my professional aspirations.

You may find my resume, certificates and portfolio of unique projects on my Github account.

Thank you for your consideration.

Sincerely,
Mushfiq
